

# Millennium

## Reverse Osmosis System

*Effectively used to reduce:*

- *Nitrates*
- *Lead*
- *Arsenic (pentavalent)*
- *Cysts (Crypto/Giardia)*
- *Fluoride*
- *Radium*

### *Drink for Health*

It is a well-known fact that people should drink eight glasses of water a day to help maintain a healthy life-style.

### *Drink for Quality*

Flavorful coffee, tea and juices; cleanly-rinsed fruits and vegetables; better tasting soups, sauces and meals.

### *Drink for Savings*

There will be no more expensive bottled water to buy.

### *Drink for Convenience*

Delicious, sparkling, clear water - on demand.

**Hellenbrand®**

Tested and Certified by NSF International against NSF/ANSI Standard 58 for the reduction of the claims specified on the Performance Data Sheet.

## How your Millennium Reverse Osmosis System works . . .

The Millennium RO System filters the water four times before it reaches your glass, giving your family healthy, crystal clear drinking water.

### *Features*

#### **Prefilter**

The Millennium Prefilter is a sediment/carbon block cartridge designed to remove particles such as silt, rust and scale along with chlorine, taste and odors.

#### **Membrane**

Water travels from the prefilter into the membrane. The majority of the dissolved solids and other substances are flushed into the drain's water stream and exit the system. It filters out the substances, reducing them so that the water becomes Millennium Reverse Osmosis Water.

#### **Post Filter**

Any tastes or odors remaining in the water will be reduced by the carbon post-filter before the water enters the storage tank.

#### **Polishing Filter**

Before reaching the faucet, the water from the storage tank flows through one final stage of filtration - another activated carbon filter. This extra filter assures you of good tasting, crystal clear water.

#### **Convenient Install**

Your Millennium RO System can be installed under your kitchen sink, in a cabinet or in your basement.

### *Hellenbrand Millennium Reverse Osmosis Water is ideal for:*

- Drinking Water
- Coffee, Tea and Juices
- Beverages and Mixes
- Rinsing Fruits & Vegetables
- Cooking
- Weight-Loss & Low-Sodium Diets
- Baby Formulas
- Ice Cubes
- Watering Plants
- Aquariums and Pet Drinking Water
- Steam Irons and Humidifiers
- Rinsing Crystal & Silverware
- Cleaning Concentrates
- Washing Windows
- And More!

### *Other Features*

#### **Simple Maintenance**

Maintenance is simple. Change the prefilter and post filters every 6 to 12 months. The membrane typically lasts several years, until the rejection rate is less than 75%. The optional quality monitor on your faucet will let you know when it is time to change the membrane.

#### **Automatic Shutoff**

The automatic shutoff tells the system when the storage tank is full. It also tells the system when water is being used and when it is time to make more water.

#### **Optional Water Quality Monitor**

This long-reach, stylish faucet has an option of a convenient water quality indicator light located in the base of the faucet. The Water Quality Monitor compares the total dissolved solids (TDS) level of incoming water with the Millennium Reverse Osmosis Water and is set for a 75% TDS rejection per NSF/ANSI Standard 58. Simply push the water quality check button on the faucet base. As long as the TDS rejection rate is above 75%, you will get a green light. The amber light comes on, however, when the rejection rate is less than 75%, indicating there is a problem or it is time to change the membrane.
